

Postdoctoral Researcher in Experimental Fluid Dynamics

for the Applied Turbulence and Land-Atmosphere Systems (ATLAS) group in Mechanical and Aerospace Engineering
atlas-uh.github.io

The Research Our work spans turbulence and environmental fluid mechanics, with a strong emphasis on laboratory and field experiments. We are looking for someone with a Ph.D. in a relevant engineering/science field and a strong experimental background. Experience with turbulence measurements, wind tunnels, flow diagnostics, instrumentation, or field experiments is a plus.

Your Profile **U.S. citizenship is required due to sponsor/funding requirements.**
We are looking for an enthusiastic and self-motivated early-career researcher with good communication skills to join our group. The candidate should have a Ph.D. in mechanical engineering, civil and environmental engineering, or a related field, and experience in experimental fluid mechanics.

The Position This position is full-time with an initial term appointment of one year, and renewable for a second year depending on satisfactory performance. The salary will be \$65,000 annually, with the possibility of a higher starting salary commensurate with qualifications and experience.

Interested applicants are encouraged to contact Dr. Kelly Huang at yhuang68@uh.edu with a copy of their CV and a brief description of their research interests and experience.
